

DBREPEATER EXAMPLE NOTES

This project makes use of a pre-installed database with a simple table called "CountryCodes" with two columns named "cc_abbr" [2 digit country code] and "cc_name".[country name]. Please adjust accordingly for your own use.

1) Start a new project

- Set formName DBR020 and save it.
- Save project as DBREX

2) Drag table CountryCodes onto the form

- Remove GRID (not needed)
- Move database components out of the way.

3) Set CountryCodes Table Properties

- Limit Count to -1 (fetches all records)
- Order Field to "cc_abbr" (sort by abbreviation)

4) Drag DB Repeater onto Form and position top left

- Caption = ""
- Data Source = dsCountryCodes
- Height = 20
- Limit = 10 (show 10 records at a time)
- Restart Dataset = FALSE (what else?)
- Width = 450

5) Add 2 Labels inside dbRepeater panel to display cc_abbr and cc_name

- Both Data Source = dsCountryCodes
- Set Field Names on each as appropriate

6) Add DBPaginator

- Position about 220 pixels DOWN THE PAGE from dbRepeater
- Data Source = dsCountryCodes
- nb. Shown Records Count is # items in middle

No code needed behind the scenes.

Now hit F9 to run.
